Preliminary Amendment re Sequence Disclosures

**Amendments to the Specification:**

Please replace the paragraph beginning at page 108, line 20, with the following rewritten paragraph:

Biochemical analysis of the activated enzyme was performed on recombinant human ILK1 protein preparation using the experimental protocol outlined in the section entitled "In Vitro Activity Profile For Kinases". Typically, the ILK1 preparations were found to exhibit protein phosphotransferase activity in the presence of 50 pM[Y-32P]-ATP and 159pM ILK1 substrate (amino acid sequence: CKRRRLASLR-amide) (SEQ ID NO: 1) during a 15 minute reaction at ambient temperature.

Please delete, immediately after claim 76 on page 169, the entire section of the application entitled "Sequence Listing" and insert the enclosed Sequence Listing in place thereof.
